## PROJECTS

---

**Attendance tracking system**  
This system was created to help students tackle with their attendance shortage problem.Java was used as frond end and MYSQL as backend.

### **Our voice**

It is an android application developed to ease the communication between the common people and authorities. people can address issues to their respective representative through a post in their blog. This app would make the authorities more accessible for the common people. Android was used as front end and MYSQL as backend.

### **Face mask detection system to restrict COVID 19 spread**

An automated system that would help to detect people without mask using deep learning architecture and would notify it to respective authorities.

### **Customer support**

A mobile application that would help the employees in a customer care center to handle their calls. The employees can track the customer calls and fragment these calls based on its purpose. They can easily communicate with the manager, view their own details and performance graph through the app. Android was used as front end and MYSQL as backend.

### **MCM Scholarship**

Currently developing a scholarship website for TKM College of Engineering. The website helps students to register for MCM scholarship and the faculties can validate the data and select the most suitable student.

## **ORGANIZATIONS**

---

### **Under 25**

The under 25 campus summit is a festival that helps youngsters to learn, get inspired, meet their favorite artists, seek job opportunities and meet more ambitious people. This summit is to help students understand the wide opportunities that are available after your studies.
